> A block slides down an inclined plane with friction. Which of the following best describes the work done by friction?

> - A) Zero

> - B) Positive and increases as the block slides

> - C) Negative and decreases as the block slides

> - D) Negative and remains constant

> - E) Positive and remains constant

Strategy: Recognize that friction opposes motion, so the work done by friction is negative when the object slides down. The correct answer is C.
